UP IN SMOKE?

DIESEL ENGINE FUMES CAN KILL YOU.

If you breathe in poor quality diesel fumes, you could get lung cancer or bladder cancer. Thousands die every year from cancer caused by diesel fumes at work. Don’t let diesel fumes be your death sentence.

Look out for telltale signs that diesel may be a problem:
- Walls or surfaces are covered in soot
- There’s a smoky haze when diesel engines are used
- There is blue or black smoke coming from diesel exhaust fumes

Talk to your boss if you notice any of these things.

WORKING TOGETHER TO BEAT OCCUPATIONAL CANCER

The Institution of Occupational Safety and Health is campaigning to stop thousands of untimely deaths to work-caused cancer.
